- Exceptional noise isolation for quality sound at low volume

Always ready to go
- Carrying case protects your headphone when not in use
- Durable Flexi-Grip makes a strong flexible connection

PHILIPS
sense and simplicity

Highlights

In-line remote with mic
Want to skip a track? Change the volume? Accept or reject a call? Record a voice memo? The remote features a sensitive mic as well as volume controls, call and skip functions. It can also trigger voice control. With this headset control is at your fingertips - no need to keep your iPhone or iPod accessible or to unlock the screen.

Blissfully comfortable
Designed for blissfull comfort these headphones are wrapped in a gel sleeve. The soft sleeve gently moulds to the shape of your outer ear to make these your new favourite headphones.

For optimal fit in all ears

With a choice of 3 interchangeable ear caps from size small to large, surely there is a pair that makes these Philips earphones fit your ear perfectly.

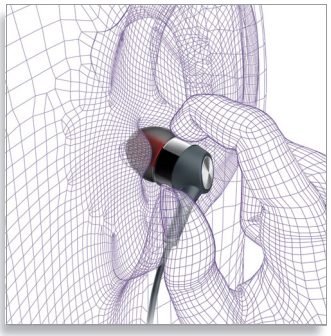
For booming sound & power
The speaker driver is made of a composite mylar material for a highly sensitve yet powerful element that enables superior power output, delivers high-fidelity sound without any audible distortion.

For most directional sound
Angled Acoustic Pipe is designed according to the curvature of the human ear canal so that soundwaves from the speaker are directed precisely to your ear drum with the highest definition

For best sound at low volume
You don't have to turn up the volume in noisy places anymore. Angled Acoustic Pipe and the perfectly sealing earbuds cut off background noise significantly, delivering the same quality sound at lower volume and a longer battery life.

Carrying Case
This case is the most convenient way to look after your headphones and prevent cable tangling when not in use.

Flexi-grip design



The soft flexi-grip material that the body of the headphone is sheathed in enhances its performance and extends its durability. It protects the cable connection from damage that otherwise could occur due to repeated bending of the headphone body from frequent contact with the user's fingertips when being put on and removed.
